Why Buy Landa Hose?

COMPARISON OF PRESSURE WASHER HOSE VS. HYDRAULIC HOSE

Pressure Washer Hose

- Must be labeled pressure washer hose to comply with UL 1776 safety standard for pressure washers
- Must have a swedge guard or bend restrictor 24" long at operator end for compliance with national safety standards
- Crimp fitting is designed to allow for expansion and contraction
- The national safety standard requires ratings label on hose

Hydraulic Hose

- Hydraulic hose is not designed for pressure washer applications. The inner tubing will crack over time when in contact with water.
- Not designed for hot water
- Hydraulic hose is found on equipment not in the operators hands. Swedge guard or bend restrictor is not required.
- Crimp fitting does not allow for expansion and contraction from hot water applications.
- Normally labeled with pressure ratings only because they are not rated for hot water

7 REASONS WHY LANDA TUFF-SKIN HOSE IS NO. 1 IN THE INDUSTRY

1. More Durable: While other manufacturers and vendors are switching to cheaper hybrid constructions, including hydraulic hoses, Landa high pressure hose is offered in standard R1 and R2 heavy-duty construction.

2. Higher Temperature Range: Landa Tuff-Skin high pressure hose is rated for temperatures of up to 275°F continuous and 310°F intermittent. Many other hoses are rated for only 250°F and don't specify an intermittent capacity.

3. Unique Braid Design: Landa offers the heavier, more flexible Tuff Flex 3/8" R1 hose in a 4000 PSI construction.

4. Higher Working Pressure: Landa's Tuff Skin R2 construction exceeds the industry standard of 4500 psi by offering a 6000 psi construction.

5. Greater Oil Resistance: Landa high pressure hoses carry the maximum Class A ORS (oil resistant rating) in both the tube and cover for longer life. Many other brands carry only a Class B ORS (medium oil resistant) rating which makes them highly susceptible to environments where oil and animal fats are present.

6. More Wear: Landa's Tuff-Skin hose has proven to deliver more abrasion resistance than comparable designs of other brands. Permanently embossed identification provides easy identification and owner protection.

7. Certified Burst Protection: Landa's Tuff-Skin hose meets the stringent UL-1776 safety standards with two hose guards—including a 24-inch sleeve on the gun end—for added operator protection against bursts.
